Glow Worm cxi, hxi & sxi PCB - Voltages

BUS VOLTAGES

Loc	Pwr On	Burner On
ST804	40V	32V
ST702	18V	18V
ST803	12V	10V
J3ZI P1	5V	5V

The 12V and 40V supplies are from separate secondary windings. This is NOT a regulated SMPS. +5V is derived from the 12V rail. +18V is derived from the 40V rail. All supplies share the common Gnd or 0V, connection P8 on J3Z1. Mains input to PCB from switch is H8, bottom right corner, marked ALIM 230V in this diagram.

U102 provides mains voltage info to uP to indicate low supply voltage. Touching U102 P6 with multimeter usually makes the burner (uP) hiccup!

Note: C809 & C810 are 35V working as supplied. Boiler on but no heat then supply is around 40V!

br = Brown g/y = Green/Yellow
b = Blue p = Pink gn = Green
bk = Black g = Gray y = Yellow
w = White r = Red or = Orange
